TD3	-	G7
TD4	-	B6
TD5	-	B7
TD6	-	N/A

Note : For 6Bit application use A to C channel and open TD+/- pin.

3. Example of System Diagram

1) 8 bit 1.8V CMOS/TTL Input

THC63LVDM87 Setting : Falling edge / Normal swing / JEITA mapping

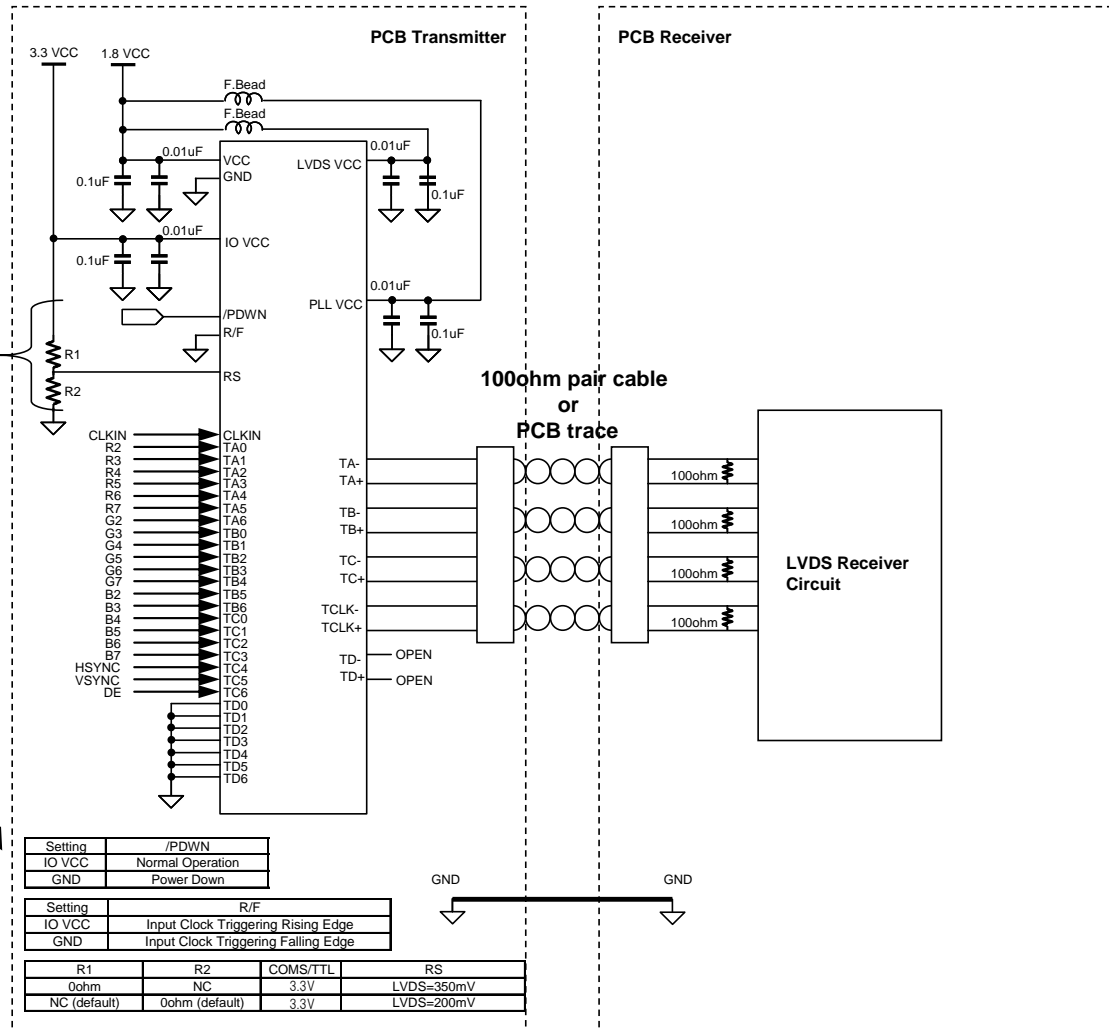

Note :

- Regarding the /PDWN, please use switching if needed.
- Regarding the R/F and RS pin, please select IOVCC level or GND level it depends on user operation.
- Please prepare the 100ohm pair cable or PCB pattern trace that is controlled with 100ohm for LVDS signal.
- Connect each Board GND
- COMS/TTL input pin that not in use, it must be tied to GND.

2) 6 bit 3.3V CMOS/TTL Input

THC63LVDM87 Setting : Falling edge / Normal swing / JEITA mapping

Note :

- Regarding the /PDWN, please use switching if needed.
- Regarding the R/F and RS pin, please select IOVCC level or GND level it depends on user operation.
- Please prepare the 100ohm pair cable or PCB pattern trace that is controlled with 100ohm for LVDS signal.
- Connect each Board GND
- COMS/TTL input pin that not in use, it must be tied to GND.

4. Note

4.1) Cable Connection and Disconnection

Do not connect and disconnect the LVDS cable, when the power is supplied to the system.

4.2) GND Connection

Connect the each GND of the Board which THC63LVDM87 and Receiver on it.
It is better for EMI reduction to place GND cable as close to LVDS cable as possible.

4.3) Multi Drop Connection

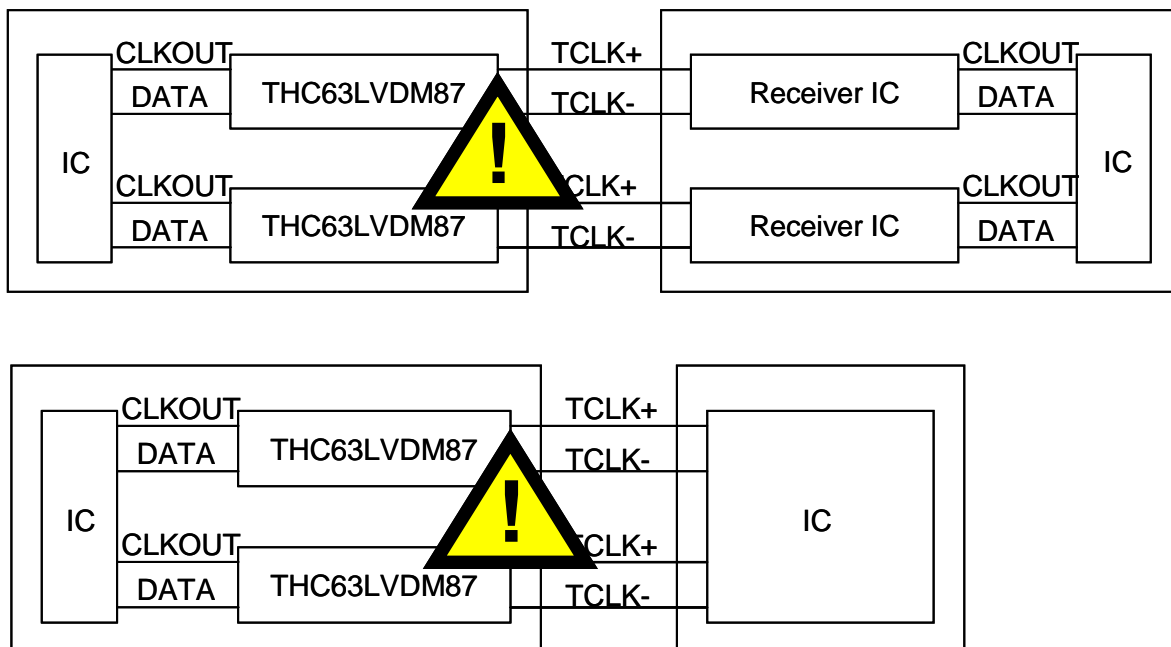

Multi drop connection is not recommended.

4.4) Asynchronous use

Asynchronous uses such as following systems are not recommended. If it's not avoidable, please contact to

mssupport@thine.co.jp (for FAE mailing list)

5. Trace Example for BGA

6. PCB Design Guide Line

General Guideline

- Use 4 layers PCB (minimum).
- Locate by-pass capacitors adjacent close to the device pins to a maximum extent.
- Make the loop minimum which is consist of Power line and GND line.
- Use large GND plane.
- Separate VDD power supply for each block via ferrite bead.

LVDS Trace

- Interconnecting media between Transmitter and Receiver (i.e. PCB trace, connector and cable) should be well balanced. (Keep all these differential impedance and the length of media as same as possible)
- Minimize the distance between traces of a pair (S1) to maximize common mode rejection. See following figure.
- Place adjacent LVDS trace pair at least twice ($>2 \times S1$) as far away as possible.
- Avoid 90 degree bends and sharp angles.
- Minimize the number of VIA on LVDS traces.
- Match impedance of PCB trace, connector, cable and termination to minimize reflections (emissions) for cabled applications (typically 100ohm differential mode characteristic impedance).
- Place terminal resistor close to the Receiver pins to a maximum extent.
- To place common mode choke coil is desired for EMI reduction.

Notices and Requests

1. The product specifications described in this material are subject to change without prior notice.
2. The circuit diagrams described in this material are examples of the application which may not always apply to the customer's design. THine Electronics, Inc. ("THine") is not responsible for possible errors and omissions in this material. Please note even if errors or omissions should be found in this material, THine may not be able to correct them immediately.
3. This material contains THine's copyright, know-how or other intellectual property rights. Copying, reverse-engineer or disclosing to third parties the contents of this material without THine's prior written permission is prohibited.
4. THINE ACCEPTS NO LIABILITY FOR ANY DAMAGE OR LOSS IN CONNECTION WITH ANY DISPUTE RELATING TO INTELLECTUAL PROPERTY RIGHTS BETWEEN THE USER AND ANY THIRD PARTY, ARISING OUT OF THIS PRODUCT, EXCEPT FOR SUCH DAMAGE OR LOSS IN CONNECTION WITH DISPUTES SUCCESSFULLY PROVED BY THE USER THAT SUCH DISPUTES ARE DUE SOLELY TO THINE. NOTE, HOWEVER, EVEN IN THE AFOREMENTIONED CASE, THINE ACCEPTS NO LIABILITY FOR SUCH DAMAGE OR LOSS IF THE DISPUTE IS CAUSED BY THE USER'S INSTRUCTION.
5. This product is not designed for applications that require extremely high-reliability/safety such as aerospace device, nuclear power control device, or medical device related to critical care, excluding when this product is specified for automotive use by THine and used it for that purpose. THine accepts no liability whatsoever for any damages, claims or losses arising out of the uses set forth above.
6. Despite our utmost efforts to improve the quality and reliability of the product, faults will occur with a certain small probability, which is inevitable to a semi-conductor product. Therefore, you are encouraged to have sufficiently fail-safe design principles such as redundant or error preventive design applied to the use of the product so as not to have our product cause any social or public damage.
7. This product may be permanently damaged and suffer from performance degradation or loss of mechanical functionality if subjected to electrostatic charge exceeding capacity of the ESD (Electrostatic Discharge) protection circuitry. Safety earth ground must be provided to

anything in contact with the product, including any operator, floor, tester and soldering iron.

8. Please note that this product is not designed to be radiation-proof.
9. Testing and other quality control techniques are used to this product to the extent THine deems necessary to support warranty for performance of this product. Except where mandated by applicable law or deemed necessary by THine based on the user's request, testing of all functions and performance of the product is not necessarily performed.
10. This product must be stored according to storage method which is specified in this specifications. THine accepts no liability whatsoever for any damage or loss caused to the user due to any storage not according to above-mentioned method.
11. Customers are asked, if required, to judge by themselves if this product falls under the category of strategic goods under the Foreign Exchange and Foreign Trade Act in Japan and the Export Administration Regulations in the United States of America on export or transit of this product. This product is prohibited for the purpose of developing military modernization, including the development of weapons of mass destruction (WMD), and the purpose of violating human rights.
12. The product or peripheral parts may be damaged by a surge in voltage over the absolute maximum ratings or malfunction, if pins of the product are shorted by such as foreign substance. The damages may cause a smoking and ignition. Therefore, you are encouraged to implement safety measures by adding protection devices, such as fuses. THine accepts no liability whatsoever for any damage or loss caused to the user due to use under a condition exceeding the limiting values.
13. All patents or pending patent applications, trademarks, copyrights, layout-design exploitation rights or other intellectual property rights concerned with this product belong to THine or licensor(s) of THine. No license or right is granted to the user for any intellectual property right or other proprietary right now or in the future owned by THine or THine's licensor. The user must enter into a license agreement with THine or THine's licensor to be granted of such license or right.
